

Kapital G Teamr

Country/Region: Ethiopia, Addis Ababa , Addis Ababa

Birth Date: March 31, 2001

Phone: +251903891940

E-Mail: Kapigere00@gmail.com

High School name: Kallamino Special High School

A Brief About Mekelle University

Founded in 1991 G.C. in Mekelle, Tigray, Mekelle University was established with the vision of expanding access to higher education and advancing academic excellence, research, and innovation in Ethiopia. Since its establishment, the university has grown into one of the country's leading public institutions, playing a vital role in producing skilled professionals and fostering intellectual development across multiple disciplines.

Mekelle University provides a comprehensive academic environment that supports learning, research, and community engagement. With a wide range of undergraduate and postgraduate programs, the university emphasizes quality education, critical thinking, and practical problem-solving. It has been particularly committed to addressing regional and national challenges through research-driven solutions and applied knowledge.

The university has distinguished itself through strong academic performance, research output, and contributions to national development. Its graduates consistently demonstrate high competence in diverse professional fields, including engineering, technology, health sciences, agriculture, and social sciences. Mekelle University has also been actively involved in advancing science, technology, and innovation, supporting initiatives aligned with digital transformation and sustainable development.

Admission to Mekelle University is competitive and merit-based, following national higher education placement standards. The institution strives to promote inclusivity and equal

opportunity by supporting students from diverse backgrounds through academic resources and student support services.

Beyond academics, Mekelle University has had a significant impact both nationally and internationally. Its alumni contribute to government institutions, private enterprises, research organizations, and global industries, extending the university's influence beyond Ethiopia. Through education, research, and innovation, Mekelle University continues to play a central role in shaping future leaders and advancing technological and social progress.

Departement- Software Engineering

Language

English – Advanced

Amharic – Advanced

Tigrigna – Advanced

French - beginner (practicing in duolingo)

Interests

I have a strong interest in coding sessions, reading self-development books, artistic painting, and playing football and tennis. These activities help me refresh mentally, develop discipline, and improve my communication and interaction with others.

I am also deeply motivated by the idea of being a source of happiness for people around me. I believe that even small acts of kindness can make a meaningful difference; if I had two loaves of bread, I would gladly share one with someone in need, finding fulfillment in their comfort and satisfaction.

During school breaks, I often return home and spend time at church, where I listen to sermons, psalms, and poems that focus on spiritual life and Christian values. I also joined a nearby Sunday School called *Abraha we Atsbha Betekrstyan*, which has played an important role in strengthening my spiritual understanding and personal growth.

In addition, I am passionate about music and enjoy connecting song lyrics to my own life experiences. My friends jokingly call me “*Gtmi Memhr Zema B’ham*”, meaning that I am good at understanding lyrics even if I am not skilled at singing them, which I find both amusing and meaningful.

My Values

I am always passionate to know new things

I am a student driven by a constant desire to learn new things and understand how the world works. My curiosity pushes me to explore unfamiliar ideas and turn questions into projects. When I first became interested in computer science, I began teaching myself programming through online courses and tutorials, experimenting with small programs to see how simple lines of code could solve real problems. During an internship at a software company, I worked with other interns to develop a Netflix clone, where I learned how recommendation logic, user interfaces, and backend systems work together. I often go beyond assigned tasks, testing new features or researching more efficient solutions simply because I want to understand how things function at a deeper level. For me, learning is an active process of experimentation and creation. Computer science gives me the freedom to keep exploring, building, and improving, while transforming curiosity into practical impact.

I am a resilient and adventurous individual who strives for excellence not only in academics but in all aspects of life.

I want to be excellent not only in academics, but also in every aspect of life. It was this attitude that helped me support my mother during the war and the post war traumas. I tried to tutor kids and help some people who could pay me at times, so I could help my mother financially. I used to travel a whole day, with other guys to make a call to regions outside of Tigray to ask my families in Addis Ababa, Ethiopia.

It is also my sense of adventure that helped me live with others from different places harmoniously, especially in Kallamino Special High School, as many of us were from different parts of Tigray. I always want to know and taste every culture, way of life and perspectives.

I delight in listening attentively to all those around me so I can find the best way to understand them and support them.

Many things may delight me, but not as much as putting myself on others' shoes, listening to them carefully, understanding them.

I always want to feel others' pain and emotion so I can make them feel better, because there were so many times in my life that I felt desperate and lonely, and I kept seeking someone who could understand me. In my country, devastated by war, natural disasters and poverty, the people need someone who can feel their pain, share their emotions and bring them solutions.

Extracurricular activities

Coordinator of data collectors on the issue of genocide during the Ethio- Tigray war

As a volunteer coordinator of data collectors, I led a team tasked with documenting human rights violations and incidents of genocide during the Ethio-Tigray war. In this role, I organized and supervised the team to ensure that the data we gathered was accurate, consistent, and handled with the utmost ethical care given the sensitivity of the information. I facilitated communication and coordination among team members working in difficult and high-risk conditions, while also assisting in compiling, verifying, and reporting the findings to support research, advocacy, and awareness efforts. Through this experience, I contributed to highlighting the humanitarian impact of the conflict and gained valuable skills in leadership, organization, and managing both logistical and emotional challenges in a challenging environment.

Using Skills to Benefit Self and Community

During high school, my friend and I developed an offline game (we name it 'guess mster') using JavaScript, which not only allowed us to explore our creativity and technical skills but also served as a source of income to cover our daily meals. This project gave me practical experience in programming, teamwork, and problem-solving, while also fostering a sense of entrepreneurship. In addition, I organized activities for fellow students to help them refresh mentally, creating opportunities for relaxation, collaboration, and stress relief. These experiences strengthened my leadership, planning, and organizational skills, while demonstrating how technical knowledge and initiative can be used to benefit both myself and my community.

Internship on prestigious company

I completed a four-month internship at a prestigious software company, **Cross Light Africa**, in Addis Ababa (Ethiopia). During this period, I served as a project leader, guiding a team of interns to successfully develop multiple projects. Among these were a Netflix clone and a simple hotel management system, designed to mimic the features of the Netflix and facilitate communication between hotel owners and managers respectively. This experience allowed me to strengthen my technical skills, leadership abilities, and teamwork, while also gaining practical insights into project planning, software development, and problem-solving in a professional environment. In recognition of my contributions and leadership, I received a Certificate of Appreciation from the company.

Tutoring

I tutor kids of all ages. I do this in summer breaks and when the school was closed during the war. I go to each students' home and teach them there. I used to teach them Physics, Mathematics and English according to their grades. This helped the community to have the kids

at home, and at the same time shift their attentions back to school. Sending the students to school was scary as there was kidnapping of young kids, so, the community loved to call me to teach their kids.

This also made me help my parents financially and earned them respect in the community. Above all, the kids in that community would say “we want to be like Kapital” when they grow up, and this pushed me positively work hard and never let them down. Whenever I am tired, I remember this, so I continue to strike my final goal. This really is positive pressure.

This helped me observe the life that everyone lives in my community and earn the trust of my community. When I tutor, I got the opportunity to see most peoples’ home, which is extremely affected by the war and other existing conditions. This motivates me to teach the kids well and makes me study hard thinking of changing or helping their lives.

Competitions and Awards

- ❖ Received a **Certificate of Recognition** for outstanding performance as a **Junior Data Analyst** at Eli International Import and Export P.L.C.
- ❖ Certificate of Completion – Artificial Intelligence Program (Udacity, 5 Million Ethiopian Coders Initiative)
- ❖ Certificate of Appreciation for my well performance on the Internship in Cross Light Africa(CLA)
- ❖ Reached the final stage of the **Maths Plus Mind Competition** , which is national wide competition on mathematics.
- ❖ Achieved **first place** in school-level **tennis competitions**, receiving a certificate of recognition.
- ❖ Participated in innovation competitions organized by the physics department at my school, showcasing creativity and problem-solving skills.
- ❖ Received a Letter of Appreciation from Kallamino Special High School in recognition of outstanding performance in the national examinations.
- ❖ Awarded a Certificate of Appreciation for my painting of former President Meles Zenawi during a school award ceremony.
